

Aave-BNS Open Data Science Pipeline

Completed acquisition → verified public data → offline analysis → result-level replication

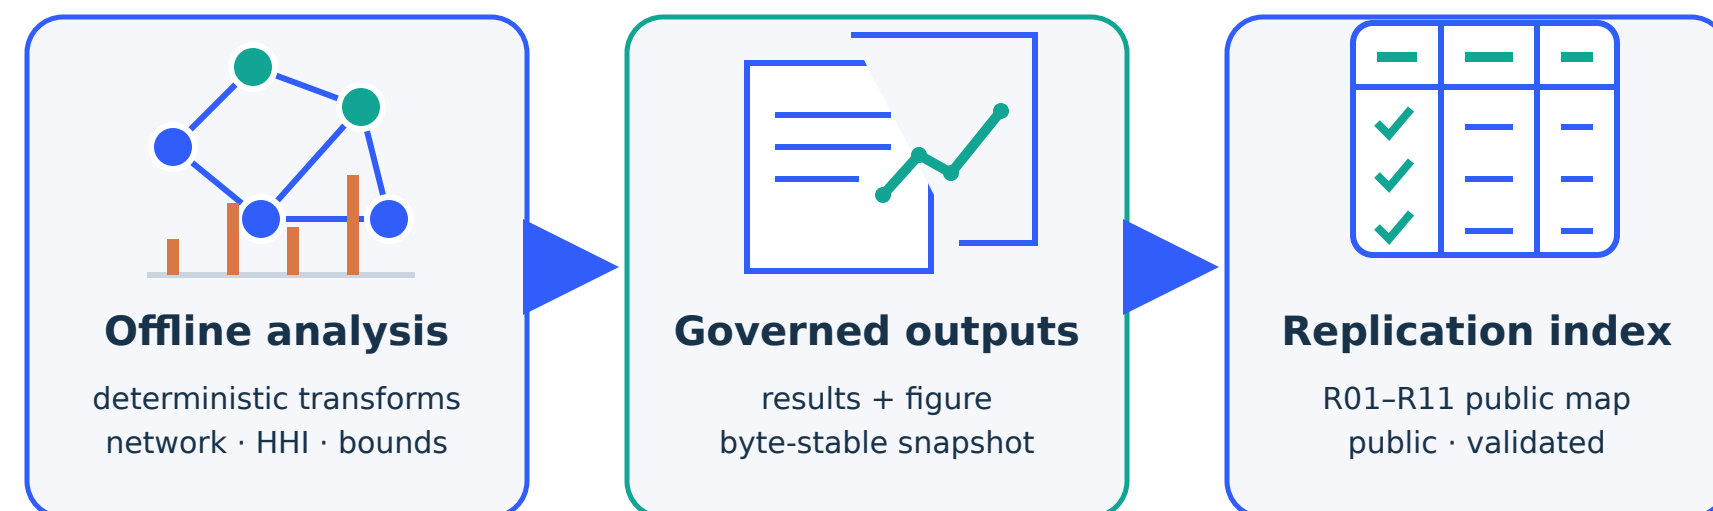

No blockchain re-query in the public release path

1 · Acquisition identity and verified migration

solid = implemented · double-check = verified migration · no new snapshot substituted

2 · Offline analysis and governed outputs

address ≠ actor · FAILED_DESIGN ≠ causal effect · HHI ≠ capital

3 · Claim / evidence ledger

Every claim carries one explicit state

- ☒ **OBSERVED** source records
- ☒ **DERIVED** deterministic metrics
- ☐ **BOUNDED** identified envelope
- ☐ **SYNTHETIC** mechanism only
- ☒ **FAILED_DESIGN** diagnostic ≠ effect
- ☒ **BLOCKED** claim withheld

4 · Public-release boundary

- Upload · immutable pin
- Viewer · Croissant
- READY FOR HF STAGING
